REC_DS using C_Week 7_COD_Question 2

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Priya is developing a simple student management system. She wants to store roll numbers in a hash table using Linear Probing, and later search for specific roll numbers to check if they exist.

Implement a hash table using linear probing with the following operations:

Insert all roll numbers into the hash table. For a list of query roll numbers, print "Value x: Found" or "Value x: Not Found" depending on whether it exists in the table.

Input Format

The first line contains two integers, n and table_size — the number of roll numbers to insert and the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert.

The third line contains an integer q — the number of queries.

The fourth line contains q space-separated integers — the roll numbers to search for.

Output Format

The output print q lines — for each query value x, print: "Value x: Found" or "Value x: Not Found"

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: 5 10
    21 31 41 51 61
    3
    31 60 51
    Output: Value 31: Found
    Value 60: Not Found
    Value 51: Found
    Answer
   #include <stdio.h>
    #define MAX 100
    // You are using GCC
    void initializeTable(int table[], int size)
      //Type your code here
      for(int i=0;i<size;i++)</pre>
        table[i]=-1;
int linearProbe(int table[], int size, int num) {
```

```
//Type your code here
void insertIntoHashTable(int table[], int size, int arr[], int n)
  //Type your code here
  for(int i=0;i<n;i++)
     int index = arr[i]%size;
     while(table[index]!=-1)
       index = (index+1)%size;
    table[index]=arr[i];
int searchInHashTable(int table[], int size, int num)
  //Type your code here
  int index = num % size;
  while(table[index]!=-1)
     if (table[index]==num)
       return 1;
     index = (index+1) % size;
  return 0;
}
int main() {
  int n, table_size;
  scanf("%d %d", &n, &table_size);
  int arr[MAX], table[MAX];
  for (int i = 0; i < n; i++)
     scanf("%d", &arr[i]);
initializeTable(table, table_size);
   insertIntoHashTable(table, table_size, arr, n);
```

```
int q, x;
scanf("%d", &q);
for (int i = 0; i < q; i++) {
    scanf("%d", &x);
    if (searchInHashTable(table, table_size, x))
        printf("Value %d: Found\n", x);
    else
        printf("Value %d: Not Found\n", x);
}

return 0;
}
Status: Correct

Marks: 10/10</pre>
